

Keep your wheels ON!!!

Often the simplest and smallest devices can make the biggest difference. Be it check points or valve caps, these small but **critical** devices ensure that your wheels run optimally...

Bandag now offers and uses another effective and inexpensive device to ensure your wheels stay on... the **Bandag Thread Gauge**.

It may not look like much, but the **Bandag Thread Gauge** is used to check and ensure that your wheel studs have adequate thread when engaging with the wheel nuts. Worn and/or stretched threads on wheel studs can be catastrophic and cause untold damage to vehicles. Notwithstanding damage to vehicles, they can also be a danger to other road users...

With this device, preventative maintenance is possible by ensuring that wheels on trucks don't come loose due to worn and/ or stretched wheel studs. A host of other unwanted costs which can be avoided are listed below:

- Damage to Rims
- Damage to Tyres
- Damage to Axles
- Vehicle damage in the event of overturning
- Loss of Load
- Injury to third parties
- Damage to third party property

This cost saving device which is made from robust stainless steel and which can easily be carried on a key ring, can be ordered from **Bandag Head Office**.

With Bandag, you don't have to be a tyre expert. You just have to know one!

Bandag specialises in the manufacture of retreads and best- in-class after sales service. That's our promise!
